CEE - Civil and Environmental Engineering

CEE 111 Information Literacy and Research (2 Credit Hours)
This course will introduce students to the needs, access, evaluation, use, impact and ethical/legal aspects of information, as well as to the application of information literacy and research in the fields of civil and environmental engineering.
Prerequisites: ENGN 110

CEE 195 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Special topics in civil and/or environmental engineering at the introductory level.
Prerequisites: Permission of the department chair

CEE 204 Statics (3 Credit Hours)
Introduction to engineering problems and their solutions through a study of the statics of particles and rigid bodies.
Prerequisites: MATH 211 with a C or higher
Pre-or corequisite: PHYS 231N

CEE 205 Engineering Dynamics (3 Credit Hours)
This course is designed to assist engineering students in acquiring a more thorough knowledge and proficiency in engineering mechanics. The course follows CEE 204 in the mechanics sequence. In this course, kinematics of particles and rigid bodies, mass moments of inertia, acceleration, work, energy, power, and special applications in the civil engineering field, such as inertia problems in vehicle collisions, rudiments of wave dynamics, etc. are included.
Prerequisites: CEE 204 with a grade of C or better

CEE 220 Mechanics of Deformable Bodies (3 Credit Hours)
This course provides fundamental theories to understand the strength of materials focused on civil engineering applications. It will cover stress-strain relationship, equilibrium of deformable bodies and behavior of axially loaded members. It will also analyze for stresses, strains, and deformation of members subjected to torsions in both elastic and inelastic ranges. Other topics, such as buckling and stability of columns, Mohr circle, and energy methods will also be discussed.
Prerequisites: CEE 204 with a grade of C or better

CEE 240 Geographic Information Systems in Civil and Environmental Engineering (2 Credit Hours)
Geographic Information Systems as they apply to civil and environmental engineering. Spatial data acquisition, generation and analysis methods from terrestrial, aerial and satellite sources. Modeling of terrain, land, and hydrographic information using CAD and GIS software in the creation and application of CAD design and GIS spatial databases to engineering problems.
Prerequisites: MATH 212, sophomore standing or higher

CEE 295 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Topics in civil and/or environmental engineering at the basic engineering level.
Prerequisites: Permission of the department chair

CEE 304 Probability and Statistics for Civil Infrastructure (3 Credit Hours)
This course studies the fundamentals of probability and statistics that are widely used in various fields of engineering. Specific areas of study include probability theory, counting methods, statistics and parameters, propagation of error, probability distribution functions, central limit theorem, hypothesis testing, linear regression, and correlation analysis. Applications of statistics and probability analysis in civil and environmental engineering will be discussed through examples. Furthermore, an introduction to data science and an overview of applications of artificial intelligence in CEE problems will also be discussed.
Prerequisites: junior standing in CEE

CEE 305 Numerical Methods for Civil and Environmental Engineering (1 Credit Hour)
Introduction to selected numerical methods and their applications in solving civil and environmental engineering problems.
Prerequisites: ENGN 150 or ENGN 122 and sophomore standing or higher

CEE 310 Structures I (3 Credit Hours)
Prerequisites: CEE 220 with a grade of C or better

CEE 320 Civil Engineering Materials (3 Credit Hours)
Properties of steel, portland cement concrete, bituminous concrete, aggregates, and timber.
Prerequisites: CEE 220

CEE 322 Soil Mechanics (3 Credit Hours)
Fundamental engineering properties of soil and their application to earth structures and foundations. Topics include seepage, compaction, strength, and deformation characteristics of soils.
Prerequisites: CEE 220
Corequisites: CEE 324

CEE 324 Soil Mechanics Laboratory (1 Credit Hour)
Performance of various soil mechanics tests, including gradation, index testing, compaction, density, permeability, consolidation, shear tests for soils are conducted for students to gain hand-on experiences. The relevant principles are covered in CEE 323.
Prerequisites: Junior standing
Corequisites: CEE 323

CEE 330 Hydromechanics (3 Credit Hours)
Fluid properties, fluid statics and fundamentals of fluid kinematics. Steady, incompressible conservation laws for mass, momentum and energy including real fluid energy losses. Turbulent, incompressible fluid flows in closed conduits and with a free surface. Introduction to thermodynamics.
Prerequisites: MATH 212 and CEE 205 and junior standing in CEE

CEE 340 Hydraulics and Water Resources (3 Credit Hours)
Prerequisites: CEE 304; CEE 330 with a grade of C or better
Corequisites: CEE 341

CEE 341 CE Hydraulics and Water Resources Laboratory (1 Credit Hour)
Performing various labs and experiments for hydraulics, hydrology, and water resources for students to gain hand-on experiences. The relevant principles are covered in CEE 340.
Prerequisites: Junior standing
Corequisites: CEE 340

CEE 350 Environmental Pollution and Control (3 Credit Hours)
Introduction to the fundamental principles of environmental engineering. Topics in water quality, water and wastewater treatment, air quality, and solid waste and landfills are discussed.
Prerequisites: CHEM 121N-CHEM 122N, MATH 211, PHYS 231N and junior standing in CEE
CEE 367 Cooperative Education (1-3 Credit Hours)
May be repeated for credit. Available for pass/fail grading only. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and Career Development Services prior to the semester in which the work experience is to take place.
Prerequisites: approval by the department and Career Development Services in accordance with the policy for granting credit for cooperative education programs

CEE 368 Internship (1-3 Credit Hours)
May be repeated for credit. Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.
Prerequisites: approval by department and Career Development Services

CEE 369 Practicum (1-3 Credit Hours)
May be repeated for credit. Available for pass/fail grading only. Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students to gain short duration career-related experience.
Prerequisites: approval by department and Career Development Services

CEE 370 Transportation Fundamentals (3 Credit Hours)
This course surveys the current practice of transportation engineering in the United States. It focuses on various ground transportation modes and covers policy, institutional planning and operational issues. Students are introduced to modeling concepts, analysis and, traffic impact analysis.
Prerequisites: Junior standing

CEE 395 Topics (1-3 Credit Hours)
Topics in civil and/or environmental engineering.
Prerequisites: permission of the instructor

CEE 402 Professional Practice of Engineering (1 Credit Hour)
The course will cover the practice and business aspects of engineering including concepts in management, business, public policy, and leadership. It will also cover public and private procurement of work, project management and execution, responsibility to clients, contracting, project finances, professional liability, and public safety.
Prerequisites: Senior standing

CEE 403W Civil Engineering Design Project and Professional Practice (3 Credit Hours)
For graduating seniors only. Group design project of civil engineering systems requiring synthesis, data gathering, preliminary investigation, master planning, conceptual designs, layouts, support studies, cost estimates and report writing. Emphasis will be on alternatives, constraints, economics, ethics and professional practice, business and project management, public policy and leadership. This is a writing intensive course.
Prerequisites: grade of C or better in CEE 401, ENGL 211C or ENGL 221C or ENGL 231C

CEE 410 Concrete Design (3 Credit Hours)
Fundamental concepts of reinforced concrete analysis and design by ultimate strength and working stress methods.
Prerequisites: CEE 310 with a grade of C or better

CEE 412/512 Computational Methods in Structures (3 Credit Hours)
Analysis of 2-D and 3-D determinate and indeterminate truss/beam/frame structures by the unified direct stiffness matrix method, for both hand-calculation and computer implementation. Popular commercialized (NASTRAN) software will also be discussed.
Prerequisites: CEE 310

CEE 414/514 Masonry Structures Design (3 Credit Hours)
Masonry materials, reinforced beams and lintels, walls, columns and pilasters, shear walls, and buildings.
Prerequisites: CEE 310

CEE 415/515 Steel Structures Design (3 Credit Hours)
Load and resistance factor design methods for steel structures.
Prerequisites: CEE 310

CEE 416/516 Wood Structures Design (3 Credit Hours)
Design of wood structures based on national design specification and load and resistance factor design.
Prerequisites: CEE 310

CEE 430/530 Foundation Engineering (3 Credit Hours)
Subsurface exploration, site preparation, design of shallow and deep foundations, and retaining structures.
Prerequisites: CEE 323 with a grade of C or better

CEE 431/531 Slope Stability and Earth Structures Design (3 Credit Hours)
Slope stability analysis, including limit equilibrium procedures, finite element method, seepage analysis, and advanced topics such as rapid drawdown, construction of embankments on soft soil, and seismic slope stability. Lateral earth retention systems, including gravity walls, excavation support systems, and applications of geosynthetic material, will be covered.
Prerequisites: CEE 323

CEE 432/532 Introduction to Earthquake Engineering (3 Credit Hours)
An overview of earthquake processes and details of the characteristics of destructive ground motion; the effects of such motion on civil engineering structures; reviews of current design practice in mitigating earthquake hazards for various civil engineering structures such as buildings, bridges, dams, lifelines, ports and harbors, etc.
Prerequisites: senior standing and permission of the instructor

CEE 433/533 Geomaterials Stabilization (3 Credit Hours)
This course studies soil and aggregate's physical, chemical and biological stabilization procedures. Students are introduced to chemical stabilization analysis and design using materials such as cement, lime, and fly ash. Physical ground modification, compaction methods and mechanical stabilization application and design are also studied.
Prerequisites: CEE 323

CEE 440/540 Hydraulic Engineering (3 Credit Hours)
Hydraulic transients; flow control structures; computer analysis of hydraulic systems; design of pipelines, open channels and culverts.
Prerequisites: CEE 340

CEE 446/546 Urban Stormwater Hydrology (3 Credit Hours)
Storm rainfall analysis, design rainfall hyetographs, runoff calculation procedures, detention basins, use of mathematical models to analyze and design urban storm drainage systems.
Prerequisites: CEE 340

CEE 447/547 Groundwater Hydraulics (3 Credit Hours)
Description of well hydraulics in single and multiple well systems. Determination of aquifer parameters from pumping tests. Use of computer models to determine drawdowns due to multiple well systems.
Prerequisites: CEE 340

CEE 450/550 Water Distribution and Wastewater Collection System Design (3 Credit Hours)
Design of water distribution systems, sanitary sewer systems and appurtenances.
Prerequisites: CEE 330
Corequisites: CEE 340

CEE 451 Water and Wastewater Treatment (3 Credit Hours)
Discussion of water quality constituents and introduction to the design and operation of water and wastewater treatment facilities.
Prerequisites: CEE 330, CEE 350

CEE 452/552 Air Quality (3 Credit Hours)
Study of air quality management standards and regulations and pollutant dynamics. Design and operation of emission control equipment for mobile and stationary sources of air pollution.
Prerequisites: CEE 350

CEE 454/554 Hazardous Waste Treatment (3 Credit Hours)
Study of sources, generation rates and characteristics of hazardous wastes and their regulation, handling, and design of treatment and disposal facilities.
Prerequisites: CEE 350
CxEE 455/555 Pollution Prevention and Green Engineering (3 Credit Hours)
Prerequisites: CEE 350

CxEE 457/557 Adaptation to Sea Level Rise (3 Credit Hours)
Investigation of complex relationships between humans and coastlines and study of how humans adapt and develop adaptation measures and solutions to tackle flooding caused by rising sea levels and subsequent heavy storm events. This course also evaluates natural and nature-based systems, engineered systems, different flood-proofing methods, and impacts of sea level rise on coastal water quality and the potential impacts on disease transmission.
Prerequisites: CEE 340 or CET 332

CxEE 458/558 Sustainable Development (3 Credit Hours)
Overview of social, economical, technical environmental aspects of regional, national and international efforts to achieve sustainable development. Discussion of the integration of industrial activity and ecological concerns utilizing principles of zero emissions, pollution prevention and design for the environment. (WEB Based, On-Line Course)
Prerequisites: junior standing or permission of instructor

CxEE 459/559 Biofuels Engineering (3 Credit Hours)
Course covers the overview of renewable energy sources; fundamentals of biofuels; biomass and types of biomass (e.g., woody biomass, forest residues, agricultural residues, energy crops); composition of lignocelluloses (cellulose, hemicellulose, and lignin); biomass conversion technologies; thermochemical, supercritical water, and biochemical conversion processes; types of biofuels from biomass; liquid fuels (bioethanol, bio-oil, biocrude, and hydrocarbons); gaseous fuels (synthesis gas, hydrogen, biodiesel); solid fuels (biochar, torrefied biomass); biodiesel from vegetable oils, algae to biofuels; value-added processing of biofuel residues; economic and environmental assessments; policies and future R&D.
Prerequisites: permission of the instructor

CxEE 471/571 Transportation Operations I (3 Credit Hours)
This is the first course in transportation operations and traffic flow theory. Topics include traffic engineering studies, capacity analysis, intersection control, traffic flow models, shockwave analysis, signal warrant analysis, and safety analysis. Course includes applications of modeling and simulation to isolated intersections.
Prerequisites: CEE 370

CxEE 474/574 Transportation Data Analytics (3 Credit Hours)
This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed., STAT 330); any programming language such as C, Python or Java is beneficial but not required.
Prerequisites: Basic probability and statistics (e.g

CxEE 475/575 Geometric Design of Highways (3 Credit Hours)
This course provides students with an understanding of basic principles and techniques in order to develop skills in the highway geometric design process. It introduces design methods for three-dimensional layout for roadways, considering cross section (lanes and shoulders, curbs, medians, roadside slopes and ditches, sidewalks), horizontal alignment (tangents and curves), and vertical alignment (grades and vertical curves).
Prerequisites: CEE 370

CxEE 482/582 Introduction to Coastal Engineering (3 Credit Hours)
Prerequisites: CEE 330 and permission of the instructor

CxEE 495/595 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.
Prerequisites: Permission of the department chair

CxEE 497 Independent Study in Civil and Environmental Engineering (1-3 Credit Hours)
Individual analytical, experimental and/or design study selected by the student and supervised by the advisor.
Prerequisites: approval of the advisor

CxEE 512 Computational Methods in Structures (3 Credit Hours)
Analysis of 2-D and 3-D determinate and indeterminate truss/beam/frame structures by the unified direct stiffness matrix method, for both hand-calculator and computer implementation. Popular commercialized (NASTRAN) software will also be discussed.
Prerequisites: CEE 310

CxEE 514 Masonry Structures Design (3 Credit Hours)
Masonry materials, reinforced beams and lintels, walls, columns and pilasters, shear walls, and buildings.
Prerequisites: CEE 310

CxEE 515 Steel Structures Design (3 Credit Hours)
Load and resistance factor design methods for steel structures.
Prerequisites: CEE 310

CxEE 516 Wood Structures Design (3 Credit Hours)
Design of wood structures based on national design specification and load and resistance factor design.
Prerequisites: CEE 310

CxEE 530 Foundation Engineering (3 Credit Hours)
Subsurface exploration, site preparation, design of shallow and deep foundations, and retaining structures.
Prerequisites: CEE 323 with a grade of C or better

CxEE 531 Slope Stability and Earth Structures Design (3 Credit Hours)
Slope stability analysis, including limit equilibrium procedures, finite element method, seepage analysis, and advanced topics such as rapid drawdown, construction of embankments on soft soil, and seismic slope stability. Lateral earth retention systems, including gravity walls, excavation support systems, and applications of geosynthetic material, will be covered.
Prerequisites: CEE 323

CxEE 532 Introduction to Earthquake Engineering (3 Credit Hours)
An overview of earthquake processes and details of the characteristics of destructive ground motion; the effects of such motion on civil engineering structures; reviews of current design practice in mitigating earthquake hazards for various civil engineering structures such as buildings, bridges, dams, lifelines, ports and harbors.
Prerequisites: permission of the instructor

CxEE 533 Geomaterials Stabilization (3 Credit Hours)
This course studies soil and aggregate's physical, chemical and biological stabilization procedures. Students are introduced to chemical stabilization analysis and design using materials such as cement, lime, and fly ash. Physical ground modification, compaction methods and mechanical stabilization application and design are also studied.
Prerequisites: CEE 323

CxEE 540 Hydraulic Engineering (3 Credit Hours)
Hydraulic transients; flow control structures; computer analysis of hydraulic systems; design of pipelines, open channels and culverts.
Prerequisites: CEE 340

CxEE 546 Urban Stormwater Hydrology (3 Credit Hours)
Storm rainfall analysis, design rainfall hyetographs, runoff calculation procedures, detention basins, use of mathematical models to analyze and design urban storm drainage systems.
Prerequisites: CEE 340
CEE 547 Groundwater Hydraulics (3 Credit Hours)
Description of well hydraulics in single and multiple well systems. Determination of aquifer parameters from pumping tests. Use of computer models to determine drawdowns due to multiple well systems.
Prerequisites: CEE 340

CEE 550 Water Distribution and Wastewater Collection System Design (3 Credit Hours)
Design of water distribution systems, sanitary sewer systems and appurtenances.
Prerequisites: CEE 330
Pre- or corequisite: CEE 340

CEE 552 Air Quality (3 Credit Hours)
Study of air quality management standards and regulations and pollutant dynamics. Design and operation of emission control equipment for mobile and stationary sources of air pollution.
Prerequisites: CEE 350

CEE 554 Hazardous Waste Treatment (3 Credit Hours)
Study of sources, generation rates and characteristics of hazardous wastes and their regulation, handling, and design of treatment and disposal facilities.
Prerequisites: CEE 350

CEE 555 Pollution Prevention and Green Engineering (3 Credit Hours)

CEE 557 Adaptation to Sea Level Rise (3 Credit Hours)
Investigation of complex relationships between humans and coastlines and study of how humans adapt and develop adaptation measures and solutions to tackle flooding caused by rising sea levels and subsequent heavy storm events. This course also evaluates natural and nature-based systems, engineered systems, different flood-proofing methods, and impacts of sea level rise on coastal water quality and the potential impacts on disease transmission.
Prerequisites: CEE 340 or CET 332

CEE 558 Sustainable Development (3 Credit Hours)
Overview of social, economical, technical environmental aspects of regional, national and international efforts to achieve sustainable development. Discussion of the integration of industrial activity and ecological concerns utilizing principles of zero emissions, pollution prevention and design for the environment.
Prerequisites: permission of instructor

CEE 559 Biofuels Engineering (3 Credit Hours)
Course covers the overview of renewable energy sources; fundamentals of biofuels; biomass and types of biomass (e.g., woody biomass, forest residues, agricultural residues, energy crops); composition of lignocelluloses (cellulose, hemicellulose, and lignin); biomass conversion technologies; thermochemical, supercritical water, and biochemical conversion processes; types of biofuels from biomass; liquid fuels (bioethanol, bio-oil, biocrude, and hydrocarbons); gaseous fuels (synthesis gas, hydrogen, biodiesel); solid fuels (biochar, torrefied biomass); biodiesel from vegetable oils, algae to biofuels; value-added processing of biofuel residues; economic and environmental assessments; policies and future R&D.
Prerequisites: permission of the instructor

CEE 571 Transportation Operations I (3 Credit Hours)
This is the first course in transportation operations and traffic flow theory. Topics include traffic engineering studies, capacity analysis, intersection control, traffic flow models, shockwave analysis, signal warrant analysis, and safety analysis. Course includes applications of modeling and simulation to isolated intersections.
Prerequisites: CEE 370

CEE 574 Transportation Data Analytics (3 Credit Hours)
This course presents the basic techniques for transportation data analytics. It will discuss statistical modeling, prominent algorithms, and visualization approaches to analyze both small- and large-scale data sets generated from transportation systems. Practices of using different data for various real-world traffic/transportation applications and decision making will also be discussed. STAT 330); any programming language such as C, Python or Java is beneficial but not required.
Prerequisites: Basic probability and statistics (e.g.

CEE 575 Geometric Design of Highways (3 Credit Hours)
This course provides students with an understanding of basic principles and techniques in order to develop skills in the highway geometric design process. It introduces design methods for three-dimensional layout for roadways, considering cross section (lanes and shoulders, curbs, medians, roadside slopes and ditches, sidewalks), horizontal alignment (tangents and curves), and vertical alignment (grades and vertical curves).

CEE 582 Introduction to Coastal Engineering (3 Credit Hours)
Prerequisites: permission of the instructor

CEE 595 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.
Prerequisites: Permission of the instructor

CEE 667 Cooperative Education (1-3 Credit Hours)
Available for pass/fail grading only. May be repeated for credit. Student participation for credit based on the academic relevance of the work experience, criteria, and evaluative procedures as formally determined by the department and Career Development Services prior to the semester in which the work experience is to take place.
Prerequisites: approval by the department and Career Development Services in accordance with the policy for granting credit for cooperative education programs

CEE 668 Internship (1-3 Credit Hours)
Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.
Prerequisites: approval by department and Career Development Services

CEE 669 Practicum (1-3 Credit Hours)
Academic requirements will be established by the department and will vary with the amount of credit desired. Allows students an opportunity to gain short duration career-related experience.
Prerequisites: approval by department and Career Development Services

CEE 695 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.
Prerequisites: Permission of the instructor

CEE 697 Independent Study in Civil and Environmental Engineering (1-3 Credit Hours)
Individual analytical, experimental and/or design study selected by the student. Approved and supervised by the advisor.
Prerequisites: permission of the instructor

CEE 698 Master’s Project (1-3 Credit Hours)
Individual project, investigation under the direction of the student’s major professor.

CEE 699 Thesis (1-6 Credit Hours)
Research leading to the Master of Science thesis.
Prerequisites: Analysis and design of steel structures under seismic loading conditions, sparse computation under MPI (Message, Passing, Interface) computer.

Details numerical step-by-step procedures to exploit parallel and elastic supports. Design examples.

CEE 700 Civil and Environmental Engineering Experimental Design (3 Credit Hours)
Graduate-level overview of engineering experimental design and analysis with emphasis on statistical methods; practical and proper statistical methods applicable to multidisciplinary, real-world civil and environmental engineering problems.

CEE 701 Applied Mathematics for Civil and Environmental Engineers (3 Credit Hours)
An examination of numerical and approximate mathematical methods for civil and environmental engineers with applications; finite-difference and finite-integral techniques for single and simultaneous ordinary differential equations; classical and finite-difference solutions of partial differential equations such as heat, wave, Laplace, and plate equation; and finite element applications selected from geotechnical, environmental, hydraulics/water resources, ocean, transportation, and structural engineering.

CEE 710 Structural Dynamics (3 Credit Hours)
Free and forced vibration of discrete and continuous systems; elastic and inelastic response of structures under dynamic loads.

CEE 711 Finite Element Analysis (3 Credit Hours)
To provide an understanding of the finite element method (FEM) as derived from an integral formulation perspective. To demonstrate the solutions of 1- and 2-D continuum mechanics problems such as solid mechanics, fluid mechanics and heat transfer.

CEE 712 Advanced Reinforced Concrete (3 Credit Hours)
Ultimate-strength theory, yield line methods, limit design, and other relevant advanced topics in the theory and design of concrete structures.

CEE 713 Prestressed Concrete (3 Credit Hours)
Analysis and design of prestressed concrete members and structures. Shrinkage, creep and losses, shear, bond and anchorages are discussed.

CEE 714 Advanced Structural Analysis (3 Credit Hours)
Elastic analysis of framed structures using matrix and numerical techniques.

CEE 715 Engineering Optimization I (3 Credit Hours)
Formulation and solution algorithms for Linear Programming (LP) problems. Unconstrained and constrained nonlinear programming (NLP) problems. Optimum solution for practical engineering systems. (Cross-listed with MAE 715 and MAE 815)

CEE 717 Bridge Structures Design (3 Credit Hours)
Design of steel, concrete, and composite bridges using modern techniques and current specifications.

CEE 718 Flood Resistant Structural Design (3 Credit Hours)
Analysis and design of flood protective shields for residential and commercial buildings, floodwalls and gates under hydrostatic, hydrodynamic, and floating debris impact forces, safety of dams and levees, sea-level rise issues for buildings and bridges, ASCE, IBC, and FEMA guidelines for flood resistant structural design, case histories.

CEE 719 Inelastic Structures (3 Credit Hours)
Inelastic analysis and behavior of framed structures.

CEE 720 Structural Stability (3 Credit Hours)
Fundamentals of elastic and inelastic stability of beams, columns and frames.

CEE 721 Plates (3 Credit Hours)
Classical and modern methods for the solution of plates of various shapes and boundary conditions, continuous and axially loaded plates and plates on elastic supports. Design examples.

CEE 722 Cluster Parallel Computing (3 Credit Hours)
Detailed numerical step-by-step procedures to exploit parallel and sparse computation under MPI (Message, Passing, Interface) computer environments are explained. Large-scale engineering/science applications are emphasized. Simultaneous linear equations are discussed.

CEE 723 Seismic Design of Steel Structures (3 Credit Hours)
Analysis and design of steel structures under seismic loading conditions, introduction to design specifications for steel structures.

Prerequisites: CEE 310 or equivalent

Prerequisites: CEE 310 or equivalent

CEE 724 Retrofitting Methods for Bridges and Buildings (3 Credit Hours)
Retrofitting methods for bridges and buildings combined with related advanced structural analysis and design techniques.

Prerequisites: CEE 730 Advanced Foundation Engineering (3 Credit Hours)
Advanced analysis and design of shallow and deep foundations and retaining structures.

Prerequisites: CEE 430/CEE 530

CEE 731 Advanced Soil Mechanics (3 Credit Hours)
Detailed study of shear strength of soils and its application to slope stability and embankment design and analysis. Advanced laboratory shear tests are included.

CEE 732 Engineering Behavior of Soils (3 Credit Hours)
Detailed study of physiochemical behavior of soils, fabric, rheology, effective stress path, and their applications to various geotechnical engineering problems.

Prerequisites: CEE 323

CEE 733 Soil Dynamics (3 Credit Hours)
Study of soil behavior under dynamic loadings. Laboratory and field techniques for determining soil properties and liquefaction potential. Design examples.

Prerequisites: CEE 323

CEE 734 Groundwater Flow (3 Credit Hours)

Prerequisites: CEE 340

CEE 735 Physicochemical Treatment Processes (3 Credit Hours)
Physical and chemical processes used in the treatment of water and waste water are covered. Separation, isolation and reaction processes are characterized as well as reactor engineering.

Prerequisites: CEE 350

CEE 736 Industrial and Environmental Engineering Microbiology (3 Credit Hours)
The use of microorganisms to treat domestic and industrial waste waters for organics and nutrient removal are studied. Characteristics of individual waste water components and the appropriate treatment processes to remove these components are covered.

Prerequisites: CEE 350

CEE 737 Advanced Processes for Water and Wastewater Treatment (3 Credit Hours)
Theory, operation and application of advanced water and waste water treatment systems, including land application, dissolved solids, organic contaminant and nutrient removal processes. Emphasis on system development for waste water reclamation/recycling.

Prerequisites: CEE 751 and CEE 752

CEE 754 Environmental Engineering Microbiology (3 Credit Hours)
A lecture and laboratory course dealing with the study of the principles and applications of microbiology in waste water treatment, water treatment, stream self-purification and their effects in environmental engineering.

Prerequisites: CEE 350
CEE 755 Water Quality Management (3 Credit Hours)
Characterization of water quality in natural systems and the human activities that result in contaminant input to these systems are studied. Management practices for minimizing contaminant input and for restoring contaminated waters are discussed.

CEE 756 Water Quality Modeling (3 Credit Hours)
Formulation of mathematical equations to describe the fate and transport of aqueous contaminants in dynamic surface water systems. Use of water quality computer models to predict various contamination scenarios.
Prerequisites: MATH 307, CEE 340, CEE 350 or permission of the instructor

CEE 759 Carbon-Free Clean Energy (3 Credit Hours)
The course presents an overview of carbon-free energy sources (nuclear, wind, solar, hydropower, and geothermal). The current status, conversion processes, economics, and environmental issues of these forms of energy will be discussed.

CEE 760 Managing Phosphorous in Circular Economy (3 Credit Hours)
This course is focused on the importance of management of phosphorous in preserving sustainable environments. The objectives of the course are to provide an overview of different phosphorous management/recovering/recycling strategies; basics of circular economy; role of microalgae in recovery and recycling of phosphorous; phosphorous recovery from wastewater; and application of the principles of circular economy towards global and regional phosphorous management.

CEE 761 Water Resources Processes and Analysis Methods (3 Credit Hours)
This course examines interactive hydrologic processes in water resource; modifications of climate change to these processes; and modern simulation and systematic analysis methods incorporating the modifications into practices of water resource planning, utilization, protection, and engineering.

CEE 762 Aquatic Chemistry in Environmental Engineering (3 Credit Hours)
Chemical reactions in natural and engineered systems are studied with emphasis placed on developing kinetic expressions and assessing chemical equilibrium. Kinetic and equilibrium expressions are applied to engineering problems to predict the reaction time and products of specific reactions.
Prerequisites: CHEM 123N

CEE 770 Transportation Safety (3 Credit Hours)
This course focuses on major transportation safety issues including transportation safety goals, safety of various transportation modes, identification of problematic locations, selection of safety countermeasures and their evaluation, safety data and modeling issues.
Prerequisites: CEE 471/CEE 571

CEE 771 Transportation Operations II (3 Credit Hours)
This is the second course in transportation operations and traffic flow theory. Topics covered include design of progressive signal systems, queuing theory, car following models, and applications of microscopic traffic simulation to corridor studies.
Prerequisites: CEE 471/CEE 571

CEE 772 Intelligent Transportation Systems (3 Credit Hours)
This course examines how ITS can be used to enhance mobility and safety. The topics covered in the course include systems engineering approach to ITS, traveler response to technologies and information, ITS planning and evaluation, and ITS deployment and operational performance.
Prerequisites: CEE 370

CEE 773 Transportation Planning (3 Credit Hours)
This course covers transportation planning processes that include policy direction, transportation data, travel demand forecasting models, and decision-making/stakeholders issues.

CEE 774 Transportation Network Flow Models (3 Credit Hours)
This course provides a rigorous introduction to transportation network modeling, with special emphasis on network equilibrium problems. Topics include: elementary graph theory, shortest path problem nonlinear optimization, optimization of univariate functions, deterministic and stochastic user equilibrium.
Prerequisites: CEE 370 or equivalent

CEE 775 Transportation Network Algorithms (3 Credit Hours)
Fundamental models and algorithms in optimization, stochastic modeling and parallel computing will be discussed and illustrated with transportation applications.

CEE 776 Simulation in Transportation Networks (3 Credit Hours)

CEE 777 Econometric Modeling in Transportation (3 Credit Hours)
The class focuses on the development of econometric modeling and its application in the field of transportation engineering. Topics to be covered include statistical inference, linear regression, count data models, discrete choice models, survival analysis, time series modeling, spatial modeling, panel data analysis, and structural equation modeling. Students will have a better understanding of the concepts and theories of econometrics and will be equipped with well-suited modeling and analysis techniques.
Prerequisites: Graduate student status

CEE 782 Design of Coastal Structures (3 Credit Hours)
Nonlinear wave theories; wave forces on slender piles and seawalls; design of rubble mound structures; design philosophy, initial costs, maintenance costs, optimized design using stochastic methods; design of renourished beaches. Advanced alternative solutions for shore protection.
Prerequisites: CEE 482/CEE 582

CEE 787 Dredging and Beach Engineering (3 Credit Hours)
Types of dredges, factors affecting dredge performance; hydraulic dredges (cutter, hopper) and mechanical dredges systems (bucket, clamshell, etc.); shoaling rate determination; inlet sand bypassing systems; beach renourishment schemes. Design of beach renourishment/projects.
Prerequisites: CEE 330

CEE 788 Coastal Hydrodynamics and Sediment Processes (3 Credit Hours)
This course discusses the hydrodynamics of the coastal environment and reviews waves, low-frequency motions, and coastal responses, including sediment processes and beach evolution. Specific topics to be covered include: review of linear wave theory; introduction to nonlinear waves; wave-averaged motions and radiation stresses; wave and current boundary layers; wave setup, longshore current, rip current, undertow, and nearshore circulation; wave dissipation mechanisms; and fluid-sediment interaction. An introduction to cohesive sediments, sediment concentration and transport models, and beach morphology will also be addressed.
Prerequisites: CEE 482/CEE 582

CEE 789 Computational Environmental Fluid Dynamics (3 Credit Hours)
Prerequisites: CEE 330

CEE 795 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.
Prerequisites: Permission of the instructor

CEE 797 Independent Study (1-3 Credit Hours)
CE 800 Civil and Environmental Engineering Experimental Design (3 Credit Hours)
Graduate-level overview of experimental design and analysis with emphasis on statistical methods; practical and proper statistical methods applicable to multidisciplinary, real-world civil and environmental engineering problems.

CE 801 Applied Mathematics for Civil and Environmental Engineers (3 Credit Hours)
An examination of numerical and approximate mathematical methods for civil and environmental engineers with applications; finite-difference and finite-integral techniques for single and simultaneous ordinary differential equations; classical and finite-difference solutions of partial differential equations such as heat, wave, Laplace, and plate equation; and finite element applications selected from geotechnical, environmental, hydraulics/water resources, ocean, transportation, and structural engineering.

CE 810 Structural Dynamics (3 Credit Hours)
Free and forced vibration of discrete and continuous systems; elastic and inelastic response of structures under dynamic loads.

CE 811 Finite Element Analysis (3 Credit Hours)
To provide an understanding of the finite element method (FEM) as derived from an integral formulation perspective. To demonstrate the solutions of (1-D and 2-D) continuum mechanics problems such as solid mechanics, fluid mechanics, and heat transfer.

CE 812 Advanced Reinforced Concrete (3 Credit Hours)
Ultimate-strength theory, yield line methods, limit design, and other relevant advanced topics in the theory and design of concrete structures.

CE 813 Prestressed Concrete (3 Credit Hours)
Analysis and design of prestressed concrete members and structures. Shrinkage, creep and losses, shear, bond, and anchorages are discussed.

CE 814 Advanced Structural Analysis (3 Credit Hours)
Elastic analysis of framed structures using matrix and numerical techniques.

CE 815 Engineering Optimization I (3 Credit Hours)
Formulation and solution algorithms for Linear Programming (LP) problems. Unconstrained and constrained nonlinear programming (NLP) problems. Optimum solution for practical engineering systems. (Cross-listed with MAE 715/MAE 815)

CE 817 Bridge Structures Design (3 Credit Hours)
Design of steel, concrete, and composite bridges using modern techniques and current specifications.

CE 818 Flood Resistant Structural Design (3 Credit Hours)
Analysis and design of flood protective shields for residential and commercial buildings, floodwalls and gates under hydrostatic, hydrodynamic, and floating debris impact forces, safety of dams and levees, sea-level rise issues for buildings and bridges, ASCE, IBC, and FEMA guidelines for flood resistant structural design, case histories.

CE 819 Inelastic Structures (3 Credit Hours)
Inelastic analysis and behavior of framed structures.

CE 820 Structural Stability (3 Credit Hours)
Fundamentals of elastic and inelastic stability of beams, columns and frames.

CE 821 Plates (3 Credit Hours)
Classical and modern methods for the solution of plates of various shapes and boundary conditions, continuous and axially loaded plates and plates on elastic supports. Design examples.

CE 822 Cluster Parallel Computing (3 Credit Hours)
Detailed numerical step-by-step procedures to exploit parallel and sparse computation under MPI (Message, Passing, Interface) computer environments are explained. Large-scale engineering/science applications are emphasized. Simultaneous linear equations are discussed.

CE 823 Seismic Design of Steel Structures (3 Credit Hours)
Analysis and design of steel structures under seismic loading conditions, introduction to design specifications for steel structures.

CE 824 Retrofitting Methods for Bridges and Buildings (3 Credit Hours)
Retrofitting methods for bridges and buildings combined with related advanced structural analysis and design techniques.

CE 825 Smart Structures (3 Credit Hours)
This course covers structural systems integrated with sensing, data processing, and control devices, which control and reduce the vibration of structures. Students will learn about basic theories of smart structures, smart materials, sensors, structural health monitoring (SHM) as well as their application to civil infrastructures.

CE 830 Advanced Foundation Engineering (3 Credit Hours)
Advanced analysis and design of shallow and deep foundations and retaining structures.

CE 831 Advanced Soil Mechanics (3 Credit Hours)
Detailed study of shear strength of soils and its application to slope stability and embankment design and analysis. Advanced laboratory shear tests are included.

CE 832 Engineering Behavior of Soils (3 Credit Hours)
Detailed study of physiochemical behavior of soils, fabric, rheology, effective stress path, and their applications to various geotechnical engineering problems.

CE 833 Soil Dynamics (3 Credit Hours)
Study of soil behavior under dynamic loadings. Laboratory and field techniques for determining soil properties and liquefaction potential. Design examples.

CE 841 Open Channel Flow (3 Credit Hours)
Momentum and energy principles, design of open channels, use of mathematical models for flow calculations in rivers, introduction to unsteady open channel flow.

CE 847 Groundwater Flow (3 Credit Hours)

CE 851 Physiochemical Treatment Processes (3 Credit Hours)
Physical and chemical processes used in the treatment of water and waste water are covered. Separation, isolation and reaction processes are characterized as well as reactor engineering.

CE 852 Biological Wastewater Treatment (3 Credit Hours)
The use of microorganisms to treat domestic and industrial waste waters for organics and nutrient removal are studied. Characteristics of individual waste water components and the appropriate treatment processes to remove these components are covered.

CE 853 Advanced Processes for Water and Wastewater Treatment (3 Credit Hours)
Theory, operation and application of advanced water and waste water treatment systems, including land application, dissolved solids, organic contaminant and nutrient removal processes. Emphasis on system development for waste water reclamation/recycling.

CE 854 Environmental Engineering Microbiology (3 Credit Hours)
A lecture and laboratory course dealing with the study of the principles and applications of microbiology in waste water treatment, water treatment, stream self-purification and their effects in environmental engineering.
CEE 855 Water Quality Management (3 Credit Hours)
Characterization of water quality in natural systems and the human activities that result in contaminant input to these systems are studied. Management practices for minimizing contaminant input and for restoring contaminated waters are discussed.

CEE 856 Water Quality Modeling (3 Credit Hours)
Formulation of mathematical equations to describe the fate and transport of aqueous contaminants in dynamic surface water systems. Use of water quality computer models to predict various contamination scenarios.
Prerequisites: MATH 307, CEE 340, CEE 350 or permission of the instructor

CEE 859 Carbon-Free Clean Energy (3 Credit Hours)
The course presents an overview of carbon-free energy sources (nuclear, wind, solar, hydropower, and geothermal). The current status, conversion processes, economics, and environmental issues of these forms of energy will be discussed.

CEE 860 Managing Phosphorous in Circular Economy (3 Credit Hours)
This course is focused on the importance of management of phosphorous in preserving sustainable environments. The objectives of the course are to provide an overview of different phosphorous management/recycling/combustion strategies; basics of circular economy; role of microalgae in recovery and recycling of phosphorous; phosphorous recovery from wastewater; and application of the principles of circular economy towards global and regional phosphorous management.

CEE 861 Water Resources Processes and Analysis Methods (3 Credit Hours)
This course examines interactive hydrologic processes in water resource; modifications of climate change to these processes; and modern simulation and systematic analysis methods incorporating the modifications into practices of water resource planning, utilization, protection, and engineering.

CEE 862 Aquatic Chemistry in Environmental Engineering (3 Credit Hours)
Chemical reactions in natural and engineered systems are studied with emphasis placed on developing kinetic expressions and assessing chemical equilibrium. Kinetic and equilibrium expressions are applied to engineering problems to predict the reaction time and products of specific reactions.
Prerequisites: CHEM 123N

CEE 870 Transportation Safety (3 Credit Hours)
This course focuses on major transportation safety issues including transportation safety goals, safety of various transportation modes, identification of problematic locations, selection of safety countermeasures and their evaluation, safety data and modeling issues.
Prerequisites: CEE 471/CEE 571

CEE 871 Transportation Operations II (3 Credit Hours)
This is the second course in transportation operations and traffic flow theory. Topics covered include design of progressive signal systems, queuing theory, car following models, and applications of microscopic traffic simulation to corridor studies.
Prerequisites: CEE 471/CEE 571

CEE 872 Intelligent Transportation Systems (3 Credit Hours)
This course examines how ITS can be used to enhance mobility and safety. The topics covered in the course include systems engineering approach to ITS, traveler response to technologies and information, ITS planning and evaluation, and ITS deployment and operational performance.
Prerequisites: CEE 370

CEE 873 Transportation Planning (3 Credit Hours)
This course covers transportation planning processes that include policy direction, transportation data, travel demand forecasting models, and decision-making/stakeholders issues.

CEE 874 Transportation Network Flow Models (3 Credit Hours)
This course provides a rigorous introduction to transportation network modeling, with special emphasis on network equilibrium problems. Topics include: elementary graph theory, shortest path problem nonlinear optimization, optimization of univariate functions, deterministic and stochastic user equilibrium.

CEE 875 Transportation Network Algorithms (3 Credit Hours)
Fundamental models and algorithms in optimization, stochastic modeling and parallel computing will be discussed and illustrated with transportation applications.

CEE 876 Simulation in Transportation Networks (3 Credit Hours)

CEE 877 Econometric Modeling in Transportation (3 Credit Hours)
The class focuses on the development of econometric modeling and its application in the field of transportation engineering. Topics to be covered include statistical inference, linear regression, count data models, discrete choice models, survival analysis, time series modeling, spatial modeling, panel data analysis, and structural equation modeling. Students will have a better understanding of the concepts and theories of econometrics and will be equipped with well-suited modeling and analysis techniques.
Prerequisites: Graduate student status

CEE 882 Design of Coastal Structures (3 Credit Hours)
Nonlinear wave theories; wave forces on slender piles and seawalls; design of rubble mound structures; design philosophy, initial costs, maintenance costs, optimized design using stochastic methods; design of renourished beaches. Advanced alternative solutions for shore protection.
Prerequisites: CEE 482/CEE 582

CEE 887 Dredging and Beach Engineering (3 Credit Hours)
Types of dredges, factors affecting dredge performance; hydraulic dredges (cutter, hopper) and mechanical dredges systems (bucket, clamshell, etc.); shoaling rate determination; inlet sand bypassing systems; beach renourishment schemes. Design of beach renourishment/projects.
Prerequisites: CEE 330

CEE 888 Coastal Hydrodynamics and Sediment Processes (3 Credit Hours)
This course discusses the hydrodynamics of the coastal environment and reviews waves, low-frequency motions, and coastal responses, including sediment processes and beach evolution. Specific topics to be covered include: review of linear wave theory; introduction to nonlinear waves; wave-averaged motions and radiation stresses; wave and current boundary layers; wave setup, longshore current, rip current, undertow, and nearshore circulation; wave dissipation mechanisms; and fluid-sediment interaction. An introduction to cohesive sediments, sediment concentration and transport models, and beach morphology will also be addressed.
Prerequisites: CEE 482/CEE 582

CEE 889 Computational Environmental Fluid Dynamics (3 Credit Hours)
Prerequisites: CEE 330

CEE 892 Doctor of Engineering Project (1-12 Credit Hours)
Directed individual study applying advanced level technical knowledge to identify, formulate, and solve a complex, novel problem in Civil and Environmental Engineering.

CEE 895 Topics in Civil and Environmental Engineering (1-3 Credit Hours)
Special topics of interest with emphasis placed on recent developments in civil and/or environmental engineering.
Prerequisites: Permission of the instructor

CEE 897 Independent Study (1-3 Credit Hours)
Individual analytical, experimental and/or design study selected by the student. Approved and supervised by the advisor.
Prerequisites: permission of the instructor

CEE 899 Dissertation Research (1-9 Credit Hours)
Research for the dissertation.
CEE 998 Master's Graduate Credit (1 Credit Hour)
This course is a pass/fail course for master's students in their final semester. It may be taken to fulfill the registration requirement necessary for graduation. All master's students are required to be registered for at least one graduate credit hour in the semester of their graduation.

CEE 999 Doctoral Graduate Credit (1 Credit Hour)
This course is a pass/fail course doctoral students may take to maintain active status after successfully passing the candidacy examination. All doctoral students are required to be registered for at least one graduate credit hour every semester until their graduation.
