Scientists in various social science disciplines.

incidents. The class also explores how cybersecurity is studied by social

to control the behaviors of those who create risks and cybersecurity

This course addresses the social, political, legal, criminological, and

Technologically-driven cybersecurity issues are connected to cultural,

The School of Cybersecurity administers a BS in Cybersecurity, a BS in

cybersecurity with a major in Cyber Operations, a BS in Cybersecurity

with a major in Cyber Risk Management, an MS in Cybersecurity,

and an interdisciplinary minor in cybersecurity. The School’s strategic

priority is to deliver exceptional academic programs for both resident

and online students to cultivate the cybersecurity workforce and enhance

the nation’s cybersecurity talent. The School supports undergraduate and

graduate students and faculty to achieve healthy and sustainable growth

of the cybersecurity program. The mission of the School also includes

developing high-impact, cross-disciplinary research initiatives that center on

cybersecurity and conducting outreach and community engagement, being

a source of cybersecurity expertise to the community, the Hampton Roads

region, the Commonwealth of Virginia, and the nation.

Courses

Cybersecurity (CYSE)

CYSE 200G Information Literacy for Cybersecurity (3 Credit Hours)
This course provides an in-depth introduction to information literacy
from library and information science, information ethics, and computer
science perspectives along with applications to cybersecurity research and
professional activity. This course is aligned with Old Dominion University’s
general education learning outcomes for information literacy.
Prerequisites: ENGL 110C

CYSE 250 Basic Cybersecurity Programming and Networking (3
Credit Hours)
This course introduces the cybersecurity-centric programming and
networking concepts. Students will develop problem solving skills by
using low-level programming languages (including C and assembly) and
learn fundamentals of network protocols. This course is the technical base
for students to take cybersecurity major courses. No prior knowledge of
programming and networking is assumed.
Prerequisites: MATH 162M or higher

CYSE 270 Linux System for Cybersecurity (3 Credit Hours)
This course introduces the basic operations in major Linux distros for
for cybersecurity using both graphical interface and command line interface.
Students will learn about the basic installation and configuration, file
systems management, shell scripts, and user authentication in Linux systems.
This course is the technical base for students to take cybersecurity major
courses.

CYSE 280 Windows System Management and Security (3 Credit Hours)
This course introduces tools and techniques used to configure, manage and
implement Windows and its security-related features. Students will install,
configure, manage and secure Windows client & server operating systems
and related networking environment using a variety of software tools. This
course also details how to mitigate malware threats, identify security issues
by using auditing and the Advanced Threat Analysis feature in Windows
Server, secure virtualization platform, and use new deployment options for
enhancing the security.

CYSE 300 Introduction to Cybersecurity (3 Credit Hours)
This course provides an overview of the field of cybersecurity. It covers
core cybersecurity topics including computer system architectures, critical
infrastructures, cyber threats and vulnerabilities, cryptography, information
assurance, network security, and risk assessment and management. Students
are expected to become familiar with fundamental security concepts,
technologies and practices, and develop a foundation for further study in
cybersecurity.
Prerequisites: MATH 162M or permission of the instructor

CYSE 301 Cybersecurity Techniques and Operations (3 Credit
Hours)
This course introduces tools and techniques used to secure and analyze large
computer networks and systems. Students will explore and map networks
using a variety of diagnostic software tools, learn advanced packet analysis,
configure firewalls, write intrusion detection rules, perform forensic
analysis, and practice techniques for penetration testing.
Prerequisites: MATH 162M and CYSE 270 or permission of the instructor

CYSE 368 Cybersecurity Internship (3-6 Credit Hours)
Internships provide a personalized exploration of structured employment
within the major. This course mandates an initial or ongoing internship that
the student obtains, as assignments are rooted in their concurrent internship
experience. Course assignments will define the employment relationship,
articulate learning outcomes, and offer opportunities for reflection to
enhance the student’s academic, career, and professional readiness. Students
must complete 50 hours of site work per course credit.
Prerequisites: The student’s internship placement must be coordinated with
the site supervisor and approved by the School of Cybersecurity’s Internship
Director

CYSE 395 Topics in Cybersecurity (1-3 Credit Hours)
Study of selected topics in cybersecurity.
Prerequisites: junior standing
CYSE 404 Law and Digital Forensics (3 Credit Hours)
This course will focus on the intersection of digital forensics and the criminal justice system, as well as digital forensics and the governmental and military domains. Students will examine the nature and types of cybercrime; search and seizure principles in the digital world; finding, handling and maintaining chain of custody of digital evidence; and testifying in court about digital evidence matters.
**Prerequisites:** Junior standing or permission of instructor

CYSE 406 Cyber Law (3 Credit Hours)
This course will focus on the intersection of digital forensics and the criminal justice system, as well as digital forensics and the governmental and military domains. Students will examine the nature and types of cybercrime; search and seizure principles in the digital world; finding, handling and maintaining chain of custody of digital evidence; and testifying in court about digital evidence matters.
**Prerequisites:** Junior standing or permission of instructor

CYSE 407 Digital Forensics (3 Credit Hours)
This course introduces the basic concepts and technologies of digital forensics. Students will learn the fundamental techniques and tools utilized for collecting, processing, and preserving digital evidence on computers, mobile devices, networks, and cloud computing environments. Students will also engage in oral and written communication to report digital forensic findings and prepare court presentation materials.
**Prerequisites:** Declared major and junior standing

CYSE 409 Crime and Computer Applications (3 Credit Hours)
The purpose of this interdisciplinary course is to introduce students to the ways in which computers are involved in the commission and the investigation of crime. Students will learn the fundamentals of cryptography and steganography and the tools used to perform these activities. Students will also use forensic software to identify, gather, and verify relevant digital evidence. Cross-listed with CRJS 409.
**Prerequisites:** CRJS 310 or permission of instructor

CYSE 416/516 Cyber Defense Fundamentals (3 Credit Hours)
This course focuses on cybersecurity theory, information protection and assurance, and computer systems and networks security. The objectives are to understand the basic security models and concepts, learn fundamental knowledge and tools for building, analyzing, and attacking modern security systems, and gain hands-on experience in cryptographic algorithms, security fundamental principles, and Internet security protocol and standards. (Offered fall)
**Prerequisites:** Permission of the instructor

CYSE 417 Digital Leadership (3 Credit Hours)
This course explores technology as it relates to leadership experiences. Theories, case studies and real-world examples are analyzed to show both successful and unsuccessful uses of online and digital approaches that inform leaders' communication strategies. Students will explore how their own digital identities may impact their futures as leaders. They will also learn how to create digital identities that will shape their professional identities throughout their careers.
**Prerequisites:** Junior standing or permission of instructor

CYSE 419/519 Cyber Physical System Security (3 Credit Hours)
Cyber Physical Systems (CPS) integrate computing, networking, and physical processes. The objectives of this course are to learn the basic concepts, technologies, and applications of CPS. Students will learn the fundamental security challenges and national security impact, and gain hands-on experience in CPS infrastructures, critical vulnerabilities, and practical countermeasures.
**Prerequisites:** ECE 355 or permission of the instructor

CYSE 420/520 Applied Machine Learning in Cybersecurity (3 Credit Hours)
This course introduces the concepts and technologies of machine learning with a focus on applications related to cybersecurity. The objectives are to learn fundamental knowledge and practical experience and identify the use case of machine learning techniques in cybersecurity. The course will discuss traditional and advanced machine learning techniques, e.g., neural network, deep convolutional neural network, generative adversarial networks, and transfer learning algorithms. Students will engage in oral and written communication by reporting and presenting the materials of the course project.
**Prerequisites:** CYSE 250 or permission of the instructor

CYSE 425W/525 Cybersecurity Strategy and Policy (3 Credit Hours)
This writing-intensive course explores cybersecurity policy and strategy and introduces students to the essentials of strategy development and policy making in cybersecurity. Topics considered include planning principles in cyber strategy; risk management and cybersecurity policy; the connections between cybersecurity policies, businesses, and governmental institutions; the knowledge, skills, and abilities needed to develop and implement cybersecurity policy; the social, political and ethical implications that arise in cybersecurity policies and strategies; strategies to assess cybersecurity policy; and the ties between national security and cybersecurity policy.
**Prerequisites:** ENGL 110C and ENGL 211C or ENGL 221C or ENGL 231C with a grade of C or better and CYSE 200T or IT 200T or POLS 101S

CYSE 426/526 Cyber War (3 Credit Hours)
This course explores the national security dimensions of cybersecurity and examines cyber war in international relations. Exploration of cyber war begins with an examination of cybersecurity as a component of national security and investigates the topics of U.S. National Cybersecurity and other national approaches to cyber war. The topics of cyber deterrence, cyber as a military domain, the roles of international organizations in cyber war, cyber terrorism, the role of social media, and information warfare will be discussed. The international dimension of cybersecurity is also discussed.
**Prerequisites:** CYSE 200T or POLS 101S or permission of the instructor

CYSE 430/530 Introduction to Cybersecurity Risk Management (3 Credit Hours)
This course addresses the broad topic of risk management and how risk, threats, and vulnerabilities impact information systems. Areas of instruction include how to assess and manage risk based on defining an acceptable level of risk for information systems. Elements of a business impact analysis (BIA), business continuity plan (BCP), disaster recovery plan (DRP), and computer incident response team (CIRT) plan will also be discussed.
**Prerequisites:** CYSE 300

CYSE 431/531 Advanced Techniques Cybersecurity Risk Management (3 Credit Hours)
Expert-level approach on the Risk Management Framework (RMF) system Authorization to Operation (ATO), including Continuous cATO. Curriculum that is aligned to the NIST SP 800-53, Revision 5. Advanced topics include Assess and Authorize, System Categorization, Security Control Assessment, System Test Results, Plan of Action and Milestones (POA&M), and Continuous Monitoring (COMON).
**Prerequisites:** CYSE 430

CYSE 432/532 Cyber Risk CSF/CMMC (3 Credit Hours)
This course introduces cybersecurity, the NIST Cybersecurity Framework (CSF), and the Cybersecurity Maturity Model Certification (CMMC) program. Topics to be addressed include the risk management fundamentals, IT risk management, and cyber risk controls; cyber threats and vulnerabilities; data security and sanitization; the NIST CSF, including its core functions, categories, and subcategories; and the CMMC comprising its levels, domains, and implementation guidelines.
**Prerequisites:** CYSE 431
CYSE 433/533 Cyber Risk FedRAMP/Audit (3 Credit Hours)
This course explores the Federal Risk and Authorization Management Program (FedRAMP) and Auditing. Topics to be addressed include an overview of the FedRAMP framework, including its objectives, components, and stages; the needed documents and guidelines to develop system security plans and security assessment reports; the NIST Risk Management Framework (RMF) comprising its different stages and the adoption mechanism; FISMA compliance and auditing assessment; and real-world case studies and future challenges.
Prerequisites: CYSE 432

CYSE 450 Ethical Hacking and Penetration Testing (3 Credit Hours)
This course introduces the basic terminologies used in ethical hacking and useful tools in relation to penetration testing on Kali Linux. Students will learn to explore the vulnerabilities in various systems and operate the industry-leading tools and framework to perform the penetration testing on different target systems.
Prerequisites: CYSE 270 and CYSE 301 or permission of the instructor

CYSE 494 Entrepreneurship in Cybersecurity (3 Credit Hours)
This course is designed to help students enhance their personal and professional development through innovation guided by faculty members and professionals. It offers students an opportunity to integrate disciplinary theory and knowledge through developing a nonprofit program, product, business, or other initiative. The real-world experiences that entrepreneurship provides will help students understand how academic knowledge leads to transformations, innovations, and solutions to different types of problems. The course can be delivered either as an independent project for individual students or as group projects similar to those sometimes offered in topics courses.
Prerequisites: Approval by the Director of the Center for Cybersecurity Education and Research

CYSE 495/595 Topics in Cybersecurity (1-3 Credit Hours)
The advanced study of selected cybersecurity topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.
Prerequisites: permission of the instructor

CYSE 496/596 Topics in Cybersecurity (1-3 Credit Hours)
The advanced study of selected cybersecurity topics designed to permit small groups of qualified students to work on subjects of mutual interest. These courses will appear in the course schedule, and will be more fully described in information distributed to academic advisors.
Prerequisites: permission of the instructor

CYSE 497/597 Tutorial Work in Special Topics in Cybersecurity (1-3 Credit Hours)
Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.
Prerequisites: Senior standing and approval of the instructor

CYSE 498/598 Tutorial Work in Special Topics in Cybersecurity (1-3 Credit Hours)
Independent reading and study on a topic to be selected under the direction of an instructor. Conferences and papers as appropriate.
Prerequisites: Senior standing and approval of the Director of the Center for Cybersecurity Education and Research
